Wikipedia: Probability interpretation. Simply put, the probability of something happening is the number of ways it can happen divided by the total number of possible outcomes. For example, the probability of rolling a 6 on a six-sided die is 1/6. In the context of betting, probability is used to determine the odds of an event occurring. Bookmakers use probability to set the odds for various events, and bettors use probability to make informed decisions about which bets to place. The concept of probability is fundamental to many areas of science and mathematics, and it is also a key component of many popular games and sports. For more information, see the Wikipedia page on Probability.
